GETTING STARTED

I. Open the Barrel: Remove nut and washer, press down on bolt with thumb while lifting up on outside of outer lid with fingers. If outer lid is difficult to remove, insert washer between edge of outer lid and barrel, twist to loosen. After outer lid has been removed, lift inner lid out by center bolt.

II. Add Rocks: Fill Barrel about 1/2 to 2/3 full of rock. Rocks should be of assorted sizes for best results.

III. Add Abrasive: Add 4 level tablespoons of 60/90 Silicon Carbide Abrasive.

Add water to cover rocks and abrasive. Do not overfill.

Add rocks until 2/3 full. Add water to top layer of rocks.

IV. Close the Barrel: Wipe the mating surfaces of the barrel and inner lid clean with a damp cloth. Press inner lid into barrel until it rests on shoulder. Press outer lid firmly down onto the barrel. Install washer and tighten nut.

Knurled nut only needs to be snug Do Not Use tools to tighten. Over tightening of the nut can cause the inner lid to distort and leak.

Make sure to align barrel guide with groove in black knurled nut.

Plug tumbler in and place barrel on tumbler.

V. Tumble: Plug the tumbler into a suitable outlet. Place the barrel on the tumbler making sure the groove in the barrel nut sits on the tumbler guide. Tumble for 2-3 days. Open and check the rocks. The rough edges should be wearing down. After 5-7 days, open the barrel and rinse the rocks in a bucket of water. DO NOT put the rinse water down a household drain as it will clog the drain!

IMPORTANT: Clean the rocks and barrel parts thoroughly using mild soap and water!

VI. Repeat steps II through V: Use successively finer abrasives according to your tumbling instruction booklet and the chart below:

	Step 1	Step 2	Step 3	Step 4
Compound	60/90 Silicon Carbide	120/220 Silicon Carbide	Pre-Polish Aluminum Oxide	Polish Aluminum Oxide
Amount	4 Tbsp	4 Tbsp	6 Tbsp	6 Tbsp

MAINTENANCE

LORTONE Tumblers are capable of operating 24 hours/day for years with proper care.

For best operation and results follow these simple, but important steps:

MOTOR: The motor is designed for continuous use and does not need oiling or other maintenance. It is normal for the motor to run hot to the touch.

CLEANING: The outside of the barrel should be kept clean. Clean by wiping with a wet soapy cloth and rinse well with fresh water. DO NOT put the barrel in a dishwasher or clean using solvents. If the outside of the barrel becomes so slick that it slips on the rollers, roughen slightly with very fine sandpaper or steel wool.

BEARINGS: Oil each shaft bearing every 30 days of operation, using one drop of lightweight lubricating oil. Do Not Use excessive oil.

DRIVE BELT: Keep the drive belt tight enough to drive the barrel without being over tightened. Improper tension (too tight) can cause motor bearing failure and belt stretch. To adjust the belt, loosen the two motor mounting nuts, slide the motor to the right, and re-tighten the nuts.

TROUBLESHOOTING

If your tumbler fails to operate correctly, check the following:

Barrel does not turn, turns very slowly, or stops after being placed on tumbler.

No Power to unit.	Make sure machine is plugged in correctly. Make sure electrical circuit is operational.
Barrel not installed correctly.	Align Barrel correctly.
Barrel Too Heavy.	Do not exceed rated capacity.
Belt Slipping.	Tighten Belt.
Drive Belt Broken.	Remove Cover and Replace Belt.
Motor doesn't run or runs intermittently.	Replace motor.

Barrel leaks or barrel lid comes off during operation.

Inner lid not seated correctly.	Make sure inner lid and barrel shoulder are clean and free of contaminants. Make sure inner lid is seated on shoulder inside barrel.
Knurled Nut over tightened.	Tighten Knurled Nut by hand only until snug. Do not use tools.
Gas build-up in barrel.	Open barrel occasionally to vent gas that might be formed during tumbling.
Barrel or Boot Gasket damaged.	Replace damaged barrel or boot gasket.

PARTS LIST

Part No.	Description
A	001-005 Top Cover
B	001-006 Base
C	001-007 Drive Shaft
D	001-008 Idler Shaft
E	203-004 Bearing, Open End (1 Required)
F	203-003 Bearing, Closed End (3 Required)
G	001-101 Drive Pulley Assembly
H	001-100 Motor Pulley With Fan
I	206-012 Retaining Ring
J	210-001 Drive Belt
K	301-034 Motor, 110v
K	301-035 Motor, 220v
L	350-003 Cord, EU, 220v
L	350-004 Cord, UK, 220v
L	350-005 Cord, USA, 110v
L	350-010 Cord, Aus/NZ, 220v
M	320-001 Strain Relief, 110v
M	320-002 Strain Relief, 220v

Part No.	Description
020-091	Complete Rubber Barrel Assembly
N	020-100 Inner Lid
O	020-001 Outer Lid
P	481-070 Knurled Nut
Q	240-010 Boot Gasket
R	240-002 Rubber Barrel Only
S	108-001 Barrel Washer

LORTONE Rotary Tumblers
are quiet, durable grinding
and polishing machines.
Follow these basic operating
and care instructions to help
keep your tumbler in optimal
running condition.
